

1	<p>Open visualise_HDR.html using a browser (Mozilla Firefox recommended).</p> <p>Note: This application does not work reliably on Chrome.</p>	
2	<p>In another window, examine the contents of the HDR_Images directory. Choose one of its sub-directories. e.g. orb-simple. Drag HDR_Images/orb-simple/Reference.hdr into the grey box in the browser window marked “Reference Image”.</p>	
3	<p>The reference image should appear in the grey box (as shown on the right) and again beneath it. Drag other images from the folder (collectively) into the second grey box in the browser window marked “Carousel – test images”.</p>	
4	<p>One of the images from the selected images will be displayed in the second grey box. You can cycle through the selected images using the < and > icons overlaid. At the bottom, moving the mouse pointer (a white box) over the second reference image dynamically shows the comparisons on the bottom right corner, with graphs.</p>
